About the BSC2022

In a bid to better understand the effects of climate change on the Baltic Sea and to chart a way forward for addressing the issue, Germany (BfN and UBA), in conjunction with Baltic Earth, will co-host the "**Baltic Stakeholder Conference 2022 - Climate Change in the Baltic Sea**" (BSC2022) on 26-27 September 2022.

The effects of climate change are already evident in the Baltic Sea. However, they are often not easy to understand and can be difficult to distinguish from other anthropogenic pressures.

BSC2022 seeks to disseminate our **knowledge about the regional effects of climate change**, while, at the same time, allowing for gathering **fresh views on climate change mitigation and adaptation** from all stakeholders in the Baltic Sea region.
